**Fading boundaries in the information landscape**
28th may 2024, Jasper Slob

Shared Information Systems

- Organisation of information systems
  - Sustainable accessibility as a service
  - Sharing as a new paradigm
- Implications for
  - Citizens
  - Organisation
  - Heritage

Datafication

Co-operation

For example…

Royal decoration

Municipality — gives advice → Province — gives advice → Chancellery — gives advice → Minister

Co-operation in a Dutch context

- 'Responsible body' concept
  - Created
  - Recieved
- Responsibility vs. management
- Complexity of 'chains'
  - Common goal
  - But, to each their own …
  - But dependant

Guideline: archiving in 'chains'

1. Principles

2. Responsibility in 'chains'
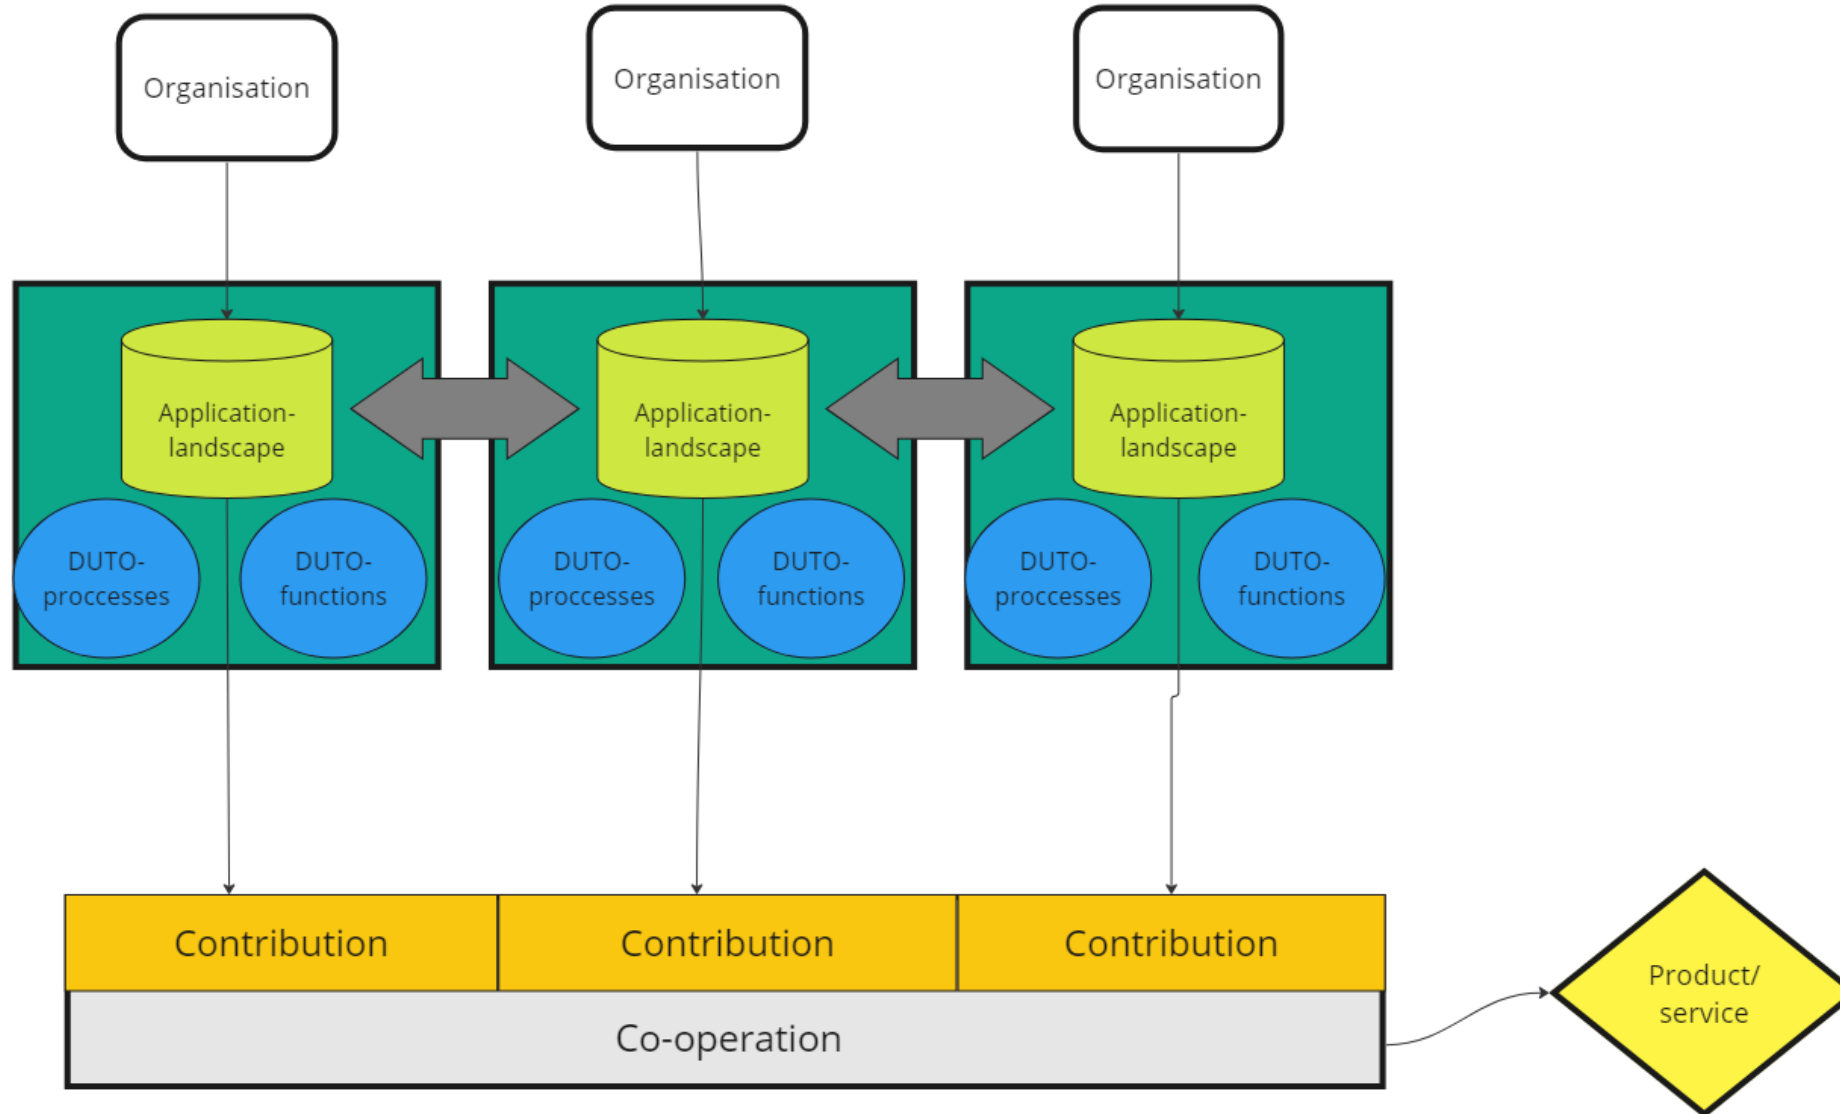

3. *Configuration options*

4. Appraisal & retention

Configuration options

- ISO-16175
- DUTO-framework
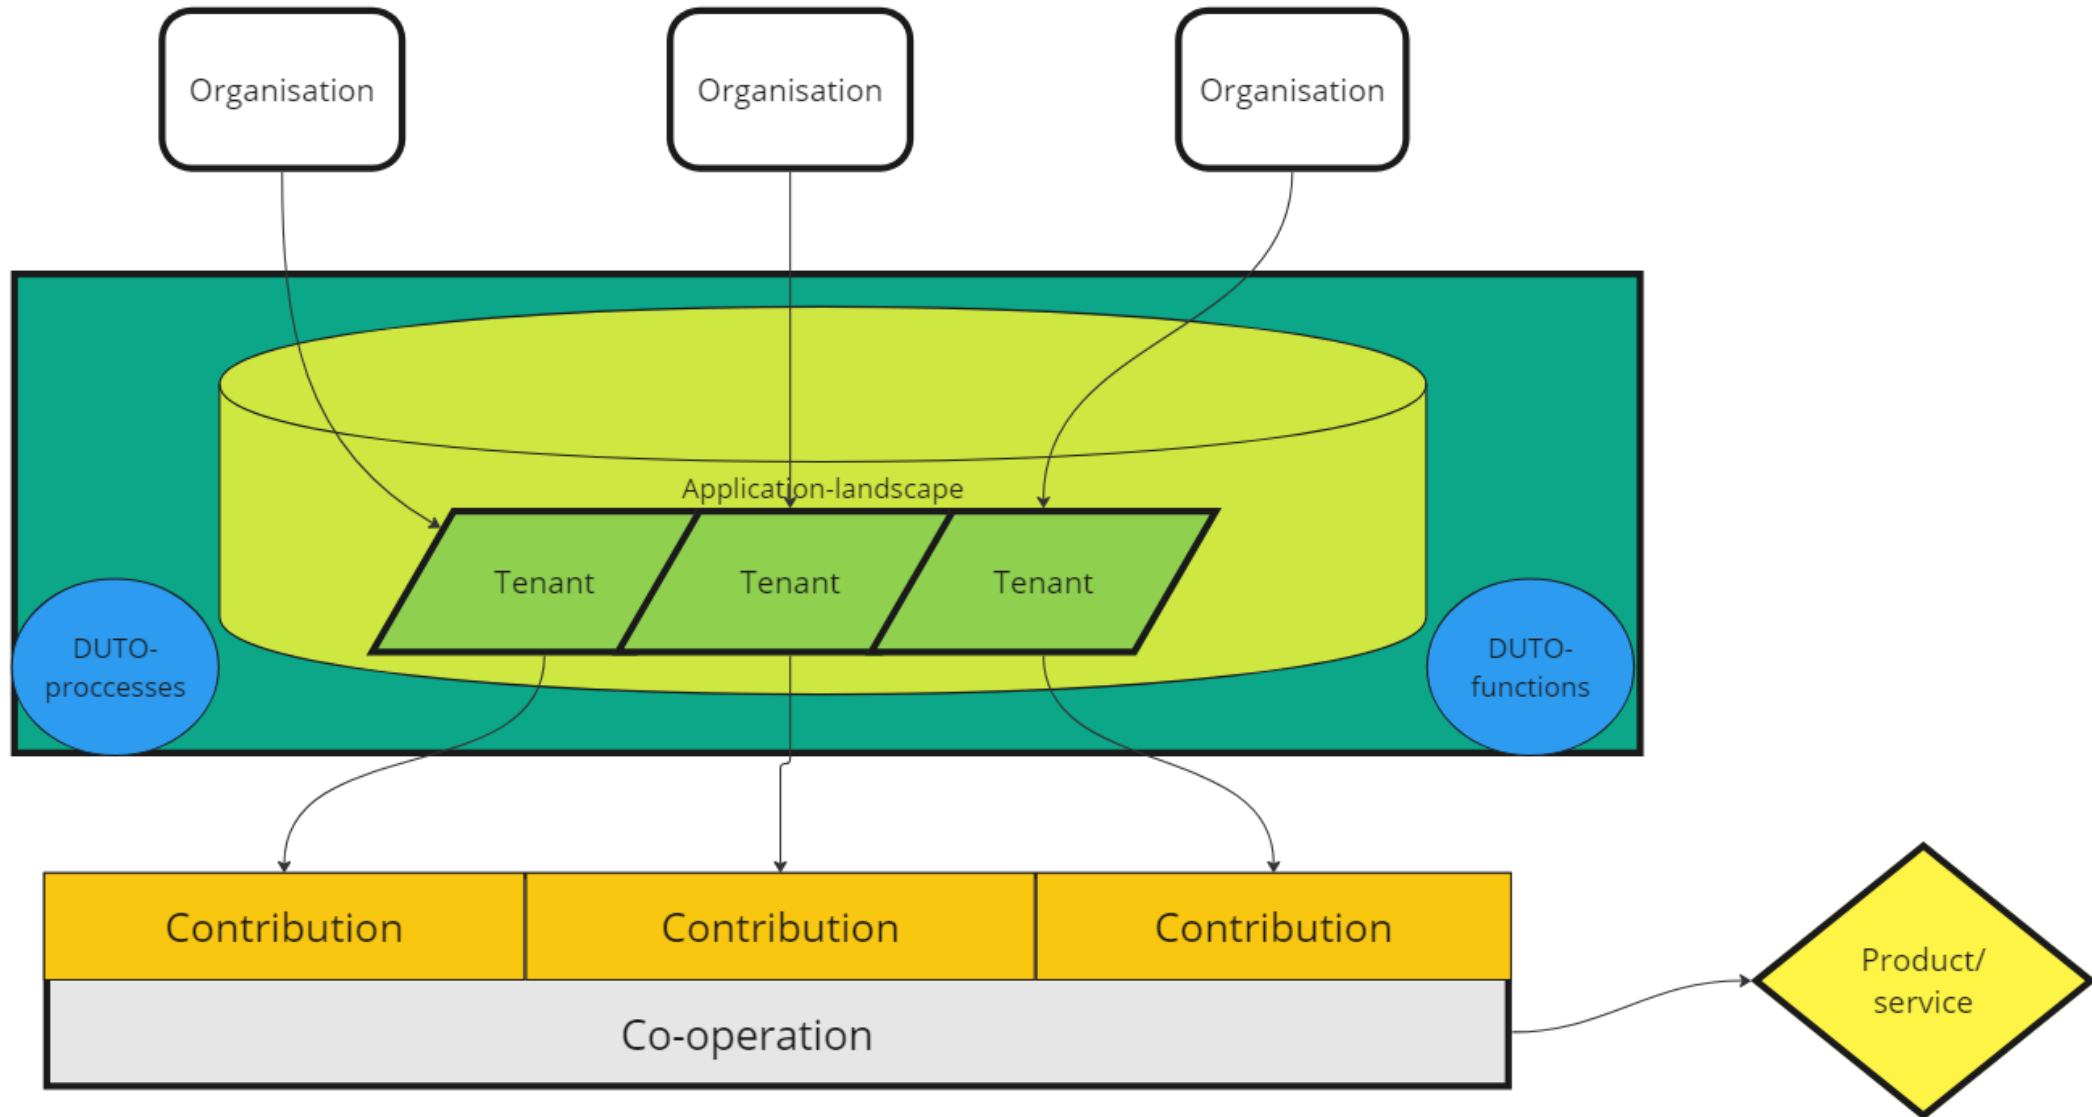

- What should I do?
- *Which are the options?*

Option 1: Silo's

Option 2: Central service

Option 3: One landscape

Discussion

- Are the complexities of co-operation recognizable?
- Are the options recognizable and practical?
  - Did we miss an option?
  - Is it usable for international co-operation?
- Your opinion on Sustainable accessibility as a service?
